# 1. General description

## Performance range

TM02 9976 4104

Fig. 1 Performance range, SQ/SQ-N/SQE/SQE-N

## SQ submersible pumps

SQ pumps are suitable for both continuous and intermittent operation for a variety of applications:

- domestic water supply
- small waterworks
- irrigation
- tank applications
- pressure boosting.

**Note:** For other applications, please contact Grundfos.

The SQ pump is a submersible pump which is available in four versions:

- SQ
- SQ-N
- SQE
- SQE-N.

SQ pumps offer the following features:

- dry-running protection
- high pump and motor efficiency
- wear resistance
- protection against upthrust
- soft starter
- overvoltage and undervoltage protection
- overload protection
- overtemperature protection.

Additionally the SQE pumps offer the following:

- variable speed
- electronic control and communication.

The motors are based on the most recent technology within permanent magnets. This technology is the main reason for the high efficiency of the motors.

The motors have a built-in electronic unit containing a frequency converter featuring soft start.

The SQ pump is fitted with a single-phase Grundfos MS 3 or MS 3-NE motor, and by means of the built-in frequency converter it is driven at a constant speed.

The SQE pump is fitted with a single-phase Grundfos MSE 3 or MSE 3-NE motor. Both motor types can communicate with the Grundfos CU 300 and CU 301 control units, which can be operated with the Grundfos R100 remote control.

The SQE pump features variable speed which is offered through frequency control. This means that the pump can be set to operate in any duty point in the range between the pump min. and max. performance curves.

The CU 301 is specially developed for applications where a constant pressure is required.

The SQE pump can operate without the CU 300 or CU 301. However, in this situation it will not offer all the features available when the pump is connected to a CU 300 or CU 301. The CU 300 and CU 301 provide full control of the SQE pumps. In case of a pump fault, an alarm will be indicated on the front of the CU 300 or CU 301. The R100 enables monitoring of the installation and changing of the factory settings.

## Pump and motor range

Product	Description	Material
SQ pump	(1, 2, 3, 5, and 7 m <sup>3</sup> /h)	Stainless steel EN 1.4301, AISI 304
SQ-N pump	(1, 2, 3, 5, and 7 m <sup>3</sup> /h)	Stainless steel EN 1.4401, AISI 316
MS 3 motor	Single-phase Max. 1.85 kW	Stainless steel EN 1.4301, AISI 304
MS 3-NE motor	Single-phase Max. 1.85 kW	Stainless steel EN 1.4401, AISI 316
MSE 3 motor	Single-phase Max. 1.85 kW	Stainless steel EN 1.4301, AISI 304
MSE 3-NE motor	Single-phase Max. 1.85 kW	Stainless steel EN 1.4401, AISI 316

## Pipe connection

Pump type	Threaded connection
SQ 1, SQ 2, SQ 3	Rp 1 1/4
SQ 5, SQ 7	Rp 1 1/2

## Type key

Code	Example	SQ	E	2	-55
	Type range				
	Basic version				
E	Electronic control and communication				
	Rated flow [m <sup>3</sup> /h]				
	Head [m] at rated flow				
	Material code:				
	Stainless steel EN 1.4301				
N	Stainless steel EN 1.4401				

## Pumped liquids

SQ and SQE pumps are designed for pumping thin, clean, non-aggressive and non-explosive liquids, not containing solid particles or fibres. SQ and SQE are suitable for pumping liquids with a content of sand up to 50 g/m<sup>3</sup>. A higher content of sand will shorten pump life.

## Operating conditions

### Liquid temperature

Flow velocity past motor	Maximum liquid temperature [°C]
0.0 m/s (free convection)	30
Min. 0.15 m/s	40

## 2. Features and benefits

### Dry-running protection

The pumps are protected against dry running. A value of  $P_{cut-out}$  ensures cut-out of the pump in case of water shortage in the borehole, thus preventing a burnout of the motor.

$P_{cut-out}$  is factory-set both for the SQ and SQE pump.

TM01 2751 2298

Fig. 2 Dry-running protection

### High pump efficiency

The hydraulic pump components are polyamide-reinforced with 30 % glass fibre. The hydraulic design ensures high pump efficiency meaning low energy consumption and thus low energy costs.

### High motor efficiency

The motors are designed according to the permanent-magnet principle (PM motor) featuring high efficiency within a wide performance range.

TM01 2698 2298

Fig. 3 Comparison of motor efficiency

### Wear resistance

The pump impellers are not fastened to the shaft ("floating"). Each impeller has its own tungsten carbide/ceramic bearing. The design and the materials chosen ensure high wear resistance to sand and thus long product life.

TM01 3141 3498

Fig. 4 Impellers

### Protection against upthrust

Starting up a pump with a very low counter-pressure involves the risk of the entire impeller stack being lifted. This phenomenon is called upthrust. Upthrust may cause breakdown of both pump and motor.

The motors are fitted with an upthrust bearing protecting both pump and motor against upthrust and thus preventing breakdown during the critical start-up phase.

### Excellent starting capabilities

The integrated electronic unit of the motor features soft starting. Soft starting reduces the starting current and thus gives the pump a smooth and steady acceleration.

The soft starter minimises the risk of wear of the pump and prevents overloading of the mains during start-up.

The excellent starting capabilities are a result of the high locked-rotor torque of the permanent-magnet motor together with the few pump stages. The high starting reliability also applies in case of low voltage supply.

TM01 3479 4198

Fig. 5 Comparison of locked-rotor current

### Overvoltage and undervoltage protection

Overvoltage and undervoltage may occur in case of unstable voltage supply.

The integrated protection of all motors prevents damage to the motor in case the voltage moves outside the permissible voltage range.

The pump will be cut out if the voltage falls below 150 V or rises above 315 V. The motor is automatically cut in again when the voltage is again within the permissible voltage range. Therefore no extra protection relay is required.

### Overload protection

If the pump is exposed to heavy load, the current consumption will rise. The motor will automatically compensate for this by reducing the speed. If the speed falls below  $3000 \text{ min}^{-1}$ , the motor will be cut out.

If the rotor is being prevented from rotating, this will automatically be detected and the power supply will be cut out. Consequently, no extra motor protection is required.

## Overtemperature protection

A permanent-magnet motor gives off very little heat to its surroundings. In combination with an efficient internal circulation system leading the heat away from the rotor, stator and bearings, this ensures optimum operating conditions for the motor.

As an extra protection, the electronic unit has a built-in temperature sensor. When the temperature exceeds a critical limit, the motor is cut out. When the temperature has dropped, the motor is automatically cut in again.

## Reliability

The motors have been designed with a view to high reliability and have the following features:

- tungsten carbide or ceramic bearings
- thrust bearings protecting against downthrust
- product life equal to conventional AC motors.

## Variable speed

The MSE 3 motor enables continuously variable speed control within the range from 3,000 to 10,700  $\text{min}^{-1}$ . The pump can be set to operate in any duty point within the 3,000 and 10,700  $\text{min}^{-1}$  performance range of the pump. Consequently, the pump performance can be adapted to any specific requirement.

The variable-speed control facility requires the use of a CU 300 or CU 301 control unit and the R100 remote control. See page 28.

For the calculation of pump speed, the SQE Speed Calculation program is available on CD-ROM as an accessory. See page 49. On the basis of a required head and flow, the pump speed can be calculated. Furthermore, the specific pump performance curve can be illustrated.

## Installation

The SQ and SQE may be installed vertically, horizontally or in any position in between.

**Note:** The pump must not fall below the horizontal level in relation to the motor.

TM01 1375 1498

Fig. 6 Installation of SQ/SQE pumps

The following features ensure simple installation of the pump:

- Built-in non-return valve with spring.
- Low weight ensuring user-friendly handling.
- Installation in 3" or larger boreholes.
- Only an on/off switch is required. This means that no extra motor starter or starter box is necessary.
- The SQE is available with cable with a motor plug (up to 100 m).

For horizontal installation, we recommend to install the pump in a flow sleeve.

The purpose is the following:

- to ensure sufficient flow velocity past the motor and thus provide sufficient cooling
- to prevent motor and electronic unit from being buried in sand or mud.

## Service

The modular pump and motor design facilitates installation and service. The cable and plug are fitted to the pump with screws which enable replacement.

### 3. Application examples

#### SQ with pressure switch and pressure tank

The SQ is ideally suited for domestic water supply in single-family dwellings or summer cottages which are not connected to municipal waterworks. The SQ is easy to install and operate.

TM01 2447 1798

Fig. 7 Domestic water supply

#### SQ with pressure switch and pressure tank

Pos.	Part	Type	Number of units	Product number	Unit price	Total price
1	Pump	SQ				
2	Cable					
3	Cable clips					
4	Pressure tank					
12	Pressure switch					
14	Pressure gauge					
20	Mains switch					
30	Straining wire					
31	Wire clamp					

## SQ with Pressure Manager (with/without pressure tank)

### Functioning and benefits

If water is consumed, the SQ pump is cut in via the Pressure Manager. The pressure tank is installed between the SQ and the Pressure Manager. In an installation with a pressure tank, water is supplied as soon as a tap is opened. This means that the pressure tank takes over water supply during the smooth start up of the SQ pump (about 3 seconds).

When the water consumption stops (flow = 0), the pump will continue operating for 10 seconds building up pressure in the pressure tank.

The setting of the tank precharge pressure depends on the water level (difference of height between water level and Pressure Manager).

The setting of the flow-pipe pressure at the pressure tank depends on the water level (difference of height between water level and Pressure Manager) according to the following table:

Difference of height [m]	Flow-pipe pressure in pressure tank [bar]
0	1.22
10	1.0
20	0.77
30	0.56

- 1 SQ pump
- 2 Cable
- 3 Cable clips
- 4 Pressure tank
- 14 Pressure gauge
- 17 Isolating valve
- 18 Tap
- 22 Riser pipe
- 23 PM 1 or PM 2 Pressure Manager available with/without plug
- 24 Union
- 25 Plug
- 26 Mains connection, 1 x 200-240 V, 50/60 Hz, for PM 1 or PM 2
- 30 Straining wire
- 31 Wire clamp

**Note:** For the Pressure Manager, back-up fuse max. 10 A.

System pressure: max. 10 bar.

The following pump types can be used:  
SQ 1-65, SQ 1-80, SQ 2-35, SQ 2-55, SQ 2-70, SQ 2-85,  
SQ 3-40, SQ 3-55, SQ 3-65, SQ 3-80.

The installation must be designed for maximum pump pressure.

Do not install draw-off points between the pump and the Pressure Manager.

TM01 2987 3411

Fig. 8 SQ with Pressure Manager

## SQ with Pressure Manager (with/without pressure tank)

Pos.	Part	Type	Number of units	Product number	Unit price	Total price
1	Pump	SQ				
2	Cable					
3	Cable clips					
4	Pressure tank	18 litres				
14	Pressure gauge					
23	Pressure Manager					
30	Straining wire					
31	Wire clamp					

## Constant-pressure control with the CU 301, residential water supply

### Features and benefits

The system maintains a constant pressure within the maximum pump performance in spite of a varying water consumption.

The pressure is registered by the pressure sensor and transmitted to the CU 301. The CU 301 adjusts the pump performance accordingly.

### Function

When a tap is opened, the pressure in the 8-litre tank will start to drop.

At a flow lower than approximately 0.18 m<sup>3</sup>/h, the pressure will drop slowly. When the pressure in the tank is 0.5 bar below setpoint, the pump will start. The pump will run until the pressure is 0.5 bar above setpoint. This way of operation is called on/off operation.

At a flow higher than approximately 0.18 m<sup>3</sup>/h, the pressure will drop quickly and the pump will start immediately and maintain a constant pressure.

During operation, the CU 301 will control the pump speed to maintain a constant pressure. If there is no consumption, the pump will fill up the tank and stop after a few seconds.

- 1 SQE pump
- 2 Cable
- 3 Cable clips
- 4 Pressure tank, 8 litres
- 5 CU 301 control unit
- 10 Pressure sensor, 0-6 bar
- 14 Pressure gauge
- 18 Tap
- 21 Mains connection, 1 x 200-240 V, 50/60 Hz
- 22 Riser pipe
- 30 Straining wire
- 31 Wire clamp

If a higher constant pressure (max. 10 bar) is required, use a CU 300, pressure sensor and flow switch. See page 11.

Fig. 9 Residential water supply with the CU 301

TM03 3429 0406

## Constant-pressure control with the CU 301, residential water supply

Pos.	Part	Type	Number of units	Product number	Unit price	Total price

## Maintaining a constant water table

### Functioning and benefits

A constant water table can be maintained by adjusting the pump performance. It may be important to maintain a constant water table, for example in connection with keeping out the groundwater of a building site or preventing the penetration of salt water into a borehole containing potable water.

The example shows how to maintain a constant water table by adjusting pump performance.

### Sensors

Level	Description	Reaction
<b>Level sensor (pos. 11)</b>		
Warning (max.)	Too high water level. Possible cause: Insufficient pump capacity.	Alarm relay operates.
Desired level	The water level which should be maintained.	
Warning (min.)	Too low water level. Possible cause: Too high pump capacity.	Alarm relay operates.

## Pumping from one tank to another

### Functioning and benefits

The SQE pump is ideal for pumping water from one tank to another.

### Sensors

Level	Description	Light indication on the CU 300
<b>Level sensor (pos. 11, tank at top)</b>		
Max. (stop)	When the water has reached this level, the pump stops.	Green indicator light in On/Off button is flashing.
Min. (start)	When the water has dropped to this level, the pump starts.	Green indicator light in On/Off button is permanently on.
<b>Level sensor (pos. 11, tank at bottom)</b>		
Max. (start)	When the water has reached this level, the pump starts.	Green indicator light in On/Off button is on.
Min. (stop)	When the water has dropped to this level, the pump stops.	Green indicator light in On/Off button is flashing.

TM01 2454 4801

27	Flow sleeve with strainer and supporting brackets					
29	Remote control	R100				

## Workshop setting of operating parameters

Using the CU 300 and R100 enables change of the motor speed in a workshop and thereby setting of the pump to a specific performance.

An SQE Speed Calculation program has been developed for the calculation of the speed in order to obtain the required flow rate and head.

Fig. 14 Setting of operating parameters

### Dry-running protection

The  $p_{\text{cut-out}}$  value, ensuring dry-running protection, is factory-set for the SQE pump.

If the speed of the pump is reduced by more than  $1000 \text{ min}^{-1}$ , the  $p_{\text{cut-out}}$  value must be readjusted via the CU 300 and R100.

**Note:** The SQE pump must not be started until the pump has been completely submerged below the water table. However, the motor speed can be changed even if the pump is not submerged.

TM01 8650 4801

## Workshop setting of operating parameters

Part	Type	Number of units	Product number	Unit price	Total price
Pump	SQE				
Remote control	R100				
Control unit	CU 300				
SQE Speed Calculation program					

## Manual speed control of the SQE (sampling)

### Functioning and benefits

Manual speed control of the SQE pumps is possible with an SPP 1 potentiometer and the R100.

This application is especially suitable for sampling from groundwater monitoring wells. The monitoring well is purged at high speed and the sample is taken at a low speed (quiet flow). For contaminated groundwater, we recommend the SQE-NE pump range.

If frequent sampling is required, we recommend dedicated installation of the pump, thus eliminating wear caused by frequent assembly and dismantling of the installation.

Furthermore, dedicated installation saves the costs of assembly and dismantling of the installation.

**Important:** Through dedicated installation the transfer of contamination from one monitoring well to another is avoided.

### Dry-running protection

The  $p_{cut-out}$  value, ensuring dry-running protection, is factory-set for the SQE pump.

If the speed of the pump is reduced by more than  $1000 \text{ min}^{-1}$ , the  $p_{cut-out}$  value must be readjusted via the CU 300 and R100.

TM01 9028 4801

## Replacement in existing installation

### Functioning and benefits

The SQ pump can be installed as replacement for a 4" submersible pump in an existing installation.

When water is consumed, it is taken from the pressure tank without the pump being in operation. If the preset cut-in pressure ( $p_{\text{cut-in}}$ ) is reached, the pump starts operating in the soft-start mode (run-up time approx. 3 seconds). Within this time, the pressure may drop to minimum pressure ( $p_{\text{min.}}$ ).

When water consumption stops, the pump builds up system pressure until the preset cut-out pressure ( $p_{\text{cut-out}}$ ) of the pressure switch is reached and the pump is cut out.

At this time the riser pipe between the aerator with non-return valve and the water table is emptied of water. This water is replaced by an amount of air which is pressed to the pressure tank every time the pump starts operating. The air, which serves as an air cushion, is absorbed by the pressure tank or let out to the atmosphere through the air vent. It should be tested whether the pump chosen can reach  $p_{\text{cut-out}} + A$ . See *Selection of pressure tank*, page 30. The system must be designed for maximum pump pressure.

- 1 SQ pump
- 2 Cable
- 3 Cable clips
- 6 Aerator with non-return valve
- 12 Pressure switch
- 13 Air vent
- 14 Pressure gauge
- 17 Isolating valve
- 20 Mains switch

## 4. Communication, CU 301

### CU 301 control unit

The CU 301 is a control and communication unit especially developed for the SQE submersible pumps in constant-pressure applications.

The CU 301 control unit provides the following:

- Full control of the SQE pumps.
- Two-way communication with the SQE pumps.
- Possibility of adjusting the pressure.
- Alarm indication (LED) when service is needed.
- Possibility of starting, stopping and resetting the pump simply by means of a push-button.
- Communication with the R100 remote control.

The CU 301 communicates with the pump via mains-borne signalling (Power Line Communication), meaning that no extra cables are required between the CU 301 and the pump.

The CU 301 features the following indications (see fig. 17):

1. Flow indicator
2. System pressure setting
3. System on/off
4. Button lock indicator
5. Dry-running indicator
6. Service needed in case of:
  - No contact to pump
  - Overvoltage
  - Undervoltage
  - Speed reduction
  - Overtemperature
  - Overload
  - Sensor defective

The CU 301 incorporates the following:

- external signal input for pressure sensor
- connection to an operating relay for indication of pump operation.

Fig. 17 Front view of the CU 301

TM03 3426 0406

TM02 3427 0406

Fig. 18 Cable entries of the CU 301

Dimensions stated in mm.

Fig. 19 Dimensional sketch of the CU 301

### R100 remote control

Wireless infrared remote control of the CU 301 is possible with the R100. With the R100, it is possible to monitor and change the operating parameters. See the R100 menus on page 18.

The R100 is a strong tool in case fault finding is required.

## R100 menu structure for the CU 301

Note: This menu is an example, not the factory setting.

Fig. 20 Example of the R100 menu structure for the CU 301

## R100 menus for the CU 301

### 0. General

#### 1. Operation

- 1.1 Setpoint setting
- 1.2 Selection of operating mode
- 1.3 Alarm indication.

#### 2. Status

Indication of the following:

- 2.1 Actual operating mode
- 2.2 Actual pressure
- 2.3 Actual motor speed
- 2.4 Actual motor temperature
- 2.5 Actual power input and accumulated motor power consumption
- 2.6 Accumulated number of operating hours and accumulated number of starts.

#### 3. Installation

- 3.1 Sensor parameters
- 3.2 Choice of sensor
- 3.3 Setting of maximum pressure setpoint
- 3.4 Setting of automatic restart time
- 3.5 Setting of the dry-running stop limit
- 3.6 Setting of the maximum motor speed
- 3.7 Setting of the cut-in motor speed
- 3.8 Activating or deactivating the On/Off button and the buttons for system pressure setting on the CU 301
- 3.9 Indication of pump operation
- 3.10 Allocation of number.

## 5. Communication, CU 300

### CU 300 control unit

The CU 300 is a control and communication unit especially developed for the SQE submersible pumps in constant-pressure applications.

The CU 300 control unit provides the following:

- Easy adjustment to a specific borehole.
- Full control of the SQE pumps.
- Two-way communication with the SQE pumps.
- Alarm indication of pump operation by diodes on the front.
- Possibility of starting, stopping and resetting the pump simply by means of a push-button.
- Communication with the R100 remote control.

The CU 300 communicates with the pump via mains-borne signalling (Power Line Communication), meaning that no extra cables are required between the CU 300 and the pump.

The following alarms can be indicated by the CU 300:

- No contact
- Overvoltage
- Undervoltage
- Dry running
- Speed reduction
- Overtemperature
- Overload
- Sensor alarm

The CU 300 incorporates the following:

- external signal input for two analog sensors and one digital sensor
- relay output for external alarm indication
- control according to the signals received, for example of flow, pressure, water level and conductivity.

Fig. 21 Front view of the CU 300

TM01 2760 4801

Fig. 22 Cable entries of the CU 300

TM01 2761 4801

Dimensions stated in mm.

### R100 remote control

Wireless infrared remote control of the CU 300 is possible with the R100. With the R100, it is possible to monitor and change the operating parameters. See the R100 menus on page 21.

The R100 is a strong tool in case fault finding is required.

### R100 menu structure for the CU 300

Note: This menu is an example, not the factory setting.

Fig. 24 Example of the R100 menu structure for the CU 300

## R100 menus for the CU 300

### 0. General

#### 1. Operation

- 1.1 Setpoint setting
- 1.2 Selection of operating mode
- 1.3 Alarm indication.

#### 2. Status

Indication of the following:

- 2.1 Actual operating mode
- 2.2 Actual and external setpoint
- 2.3 Actual motor temperature
- 2.4 Actual motor speed
- 2.5 Actual power input and accumulated motor power consumption
- 2.6 Accumulated number of operating hours and accumulated number of starts
- 2.7 Actual values of sensors 1 and 2, respectively
- 2.8 Actual values of the digital input
- 2.9 Accumulated flow, and the power used to pump 1 m<sup>3</sup>.

The R100 offers the possibility of making a number of settings.

#### 3. Limits

Setting of the following:

- 3.1 Sensor 1 parameters
- 3.2 Min. and max. stop limits of sensor 1
- 3.3 Min. and max. warning limits of sensor 1
- 3.4 Min. and max. alarm limits of sensor 1
- 3.5 Sensor 2 parameters
- 3.6 Min. and max. stop limits of sensor 2
- 3.7 Min. and max. warning limits of sensor 2
- 3.8 Min. and max. alarm limits of sensor 2
- 3.9 Filling or emptying
- 3.10 Setting of the function of the digital sensor connected to the digital input
- 3.11 Setting of the water quantity stop limit and the setting of the sensor to detect water quantity
- 3.12 Setting of the temperature warning limits of the motor electronics.

#### 4. Installation

- 4.1 Selection of controller
- 4.2 Setting of external setpoint
- 4.3 Setting of automatic restart time
- 4.4 Allocation of individual start delays
- 4.5 Setting of the stop and run times for the dewatering function
- 4.6 Setting of the dry-running stop limit
- 4.7 Activating or deactivating the dry-running protection
- 4.8 Setting of the maximum motor speed
- 4.9 Activating or deactivating the On/Off button on the CU 300
- 4.10 Allocation of number where more than one CU 300 is installed.

## Examples of R100 displays

### Menu OPERATION

#### Setpoint setting

Display 1.1

From factory, the pump is set to maximum speed, 10,700 min.<sup>-1</sup>. The R100 makes it possible to reduce the pump speed by changing the setpoint. The speed can be set to 3,000 - 10,700 min.<sup>-1</sup>, at 100 min.<sup>-1</sup> intervals.

The unit of the setpoint is automatically changed according to the unit of the sensor connected to sensor input 1.

**Example:** Sensor input 1 is connected to a pressure sensor using the unit metre [m] and the range 0-60. Consequently, the setpoint of display 1.1 can be set between 0-60 m.

### Menu STATUS

The displays appearing in this menu are status displays only. It is not possible to change settings in this menu.

#### Accumulated flow

Display 2.9

In display 2.9, the pumped water quantity (m<sup>3</sup>) is shown. The value shown is the accumulated flow registered by the sensor selected in display 3.11.

The power used to pump 1 m<sup>3</sup> is shown in the display as energy per m<sup>3</sup> (kWh/m<sup>3</sup>).

It is possible to read the status of the accumulated flow and energy per m<sup>3</sup> at any time.

### Accumulated number of operating hours and number of starts

Display 2.6

The number of operating hours and the number of starts are values accumulated from the time of installation and they cannot be reset.

Both values are stored in the motor electronics, and they are kept even if the CU 300 is replaced.

The number of operating hours is registered every two minutes of continuous operation.

## Menu LIMITS

### Sensor 1

Display 3.1

The setting of sensor 1.

Depending on the type of sensor, the following settings can be made:

- Sensor outputs:
  - (not active), 0-10 V, 2-10 V, 0-20 mA, 4-20 mA.
- Setting range unit: m<sup>3</sup>/h, m, %, GPM, ft.
- Sensor minimum value: 0-249 (0, 1, 2, 3.....249).
- Sensor maximum value: 1-250 (1, 2, 3, 4.....250).

## Alarm indication

The CU 300 offers the following alarm indications:

Alarm	Description	The pump will be restarted automatically
<b>No contact to pump</b>	No contact/communication between the CU 300 and the SQE pump. <b>Note:</b> This alarm does not influence pump operation.	-
<b>Overvoltage</b>	The supply voltage exceeds the voltage range.	when voltage is within specified range.
<b>Undervoltage</b>	The supply voltage is below the voltage range.	when voltage is within specified range.
<b>Dry running</b>	The dry-running protection of the pump has been activated.	after 5 min. (default), or a period set with the R100.
<b>Speed reduction</b>	The motor speed is reduced. <b>Note:</b> Speed resuming when the cause has been remedied or has disappeared.	-
<b>Overtemperature</b>	The motor temperature exceeds the temperature limit.	when motor electronics have cooled sufficiently.
<b>Overload</b>	The current consumption of the motor exceeds the value set.	after 5 min. (default), or a period set with the R100.
<b>Sensor defective</b>	Sensor alarm causes: <ul style="list-style-type: none"> <li>• The measured value has fallen outside the measuring range set.</li> <li>• The sensor is defective.</li> <li>• The sensor output setting made with the R100 is incorrect.</li> </ul>	after 5 min. (default), or a period set with the R100.

## Benefits of the CU 300 and R100

Alarm	Description	The following are no longer required
<b>No contact to pump</b>	Provides knowledge of contact between the SQE pump and the CU 300.	-
<b>Overvoltage</b>	The supply voltage is measured.	Overvoltage relay.
<b>Undervoltage</b>	The supply voltage is measured.	Undervoltage relay.
<b>Dry running</b>	Provides dry-running protection of the pump.	Level relay, electrodes, cables.
<b>Speed reduction</b>	Ensures pump operation at a moderate undervoltage and overload, thereby ensuring that the motor is not overloaded.	Urgent need for service.
<b>Overtemperature</b>	The pump is stopped at a too high temperature. When the motor electronics have cooled sufficiently, the motor will restart automatically.	-
<b>Overload</b>	Provides overload protection of the motor.	Motor starter.
<b>Sensor defective</b>	Sensors can be connected directly to the CU 300. The sensor signals are monitored.	External control unit.

## 6. Pump selection

### Determining head and flow

Pump selection is based on the water demand and the required head.

#### Water demand

The manufacturers of fittings and sprinkler systems normally state this data.

Examples of water demand:

Sprinkler systems: 1.5 m<sup>3</sup>/h per sprinkler

Domestic water supply: 2-4 m<sup>3</sup>/h

Agriculture: 4-6 m<sup>3</sup>/h

Irrigation: 6-8 m<sup>3</sup>/h

#### Head

$$H \text{ [m]} = p_{\text{tap}} \times 10.2 + H_{\text{geo}} + H_f$$

$p_{\text{tap}}$  = required pressure at the draw-off point (for example sprinkler), at least 2 bar.

$H_{\text{geo}}$  = difference of height between lower water level in well and draw-off point.

$H_f$  = loss of head in piping and tubing.

For selection of  $H_f$ , see *Head losses ( $H_f$ ) in plastic pipes and ordinary water pipes*, page 26.

#### Example of calculation

Application: Domestic water supply.

Required flow: 2.4 m<sup>3</sup>/h

$p_{\text{tap}}$  = 3 bar

$H_{\text{geo}}$  = 30 m

$H_f$  = 7.7 m

The tubing is made of plastic pipe, Ø25, length 35 m.

This will give the following:

$H_f$  = value from table x length of pipe

$H_f$  = 0.22 x 35 m = 7.7 m

$$H \text{ [m]} = p_{\text{tap}} \times 10.2 + H_{\text{geo}} + H_f \\ = 3 \times 10.2 + 30 \text{ m} + 7.7 = 68.3 \text{ m}$$

**Selected at Q = 2.4 m<sup>3</sup>/h, H = 68.3 m**

For selection of the pump type best meeting the requirements, see *Pump sizing*, page 27.

## Head losses ( $H_f$ ) in plastic pipes and ordinary water pipes

Upper figures indicate the velocity of water in m/sec.

Lower figures indicate head loss in metres per 100 metres of straight pipes.

Quantity of water			Plastic pipes* (PELM/PEH PN 10 PELM)				Ordinary water pipes**				
m <sup>3</sup> /h	Litres/min.	Litres/sec.	Nominal pipe diameter in inches and internal diameter in [mm]

10.5	175	2.92	-	-	3.5 38.0	2.23 11.0	-	-	-	2.904 33.32	2.182 16.66
90 ° bends, slide valves							1.0	1.0	1.1	1.2	1.3
T-pieces, non-return valves							4.0	4.0	4.0	5.0	5.0

\* The table is based on a nomogram.  
Roughness:  $K = 0.01$  mm.  
Water temperature:  $t = 10$  °C.

\*\* The data is calculated in accordance with H. Lang's new formula  $a = 0.02$  and for a water temperature of 10 °C. The head loss in bends, slide valves, T-pieces and non-return valves is equivalent to the metres of straight pipes stated in the last two lines of the table.

## Pump sizing

**Important:** The dry-running protection is effective only within the recommended pump duty range, i.e. the bold curves. See performance curves.

Pump type	Input power (P1) [kW]	Flow rate Q [m <sup>3</sup> /h] / [l/s]													Max. head [m] (Q = 0 m <sup>3</sup> /h)	Rated current I <sub>1/1</sub> [A]		Pipe connection Rp

### Example

#### Required:

Flow rate: 2.4 m<sup>3</sup>/h => nearest higher value in the table is 2.5 m<sup>3</sup>/h.

Head: 68.3 m => nearest higher value in the table is 78 m.

#### Selected:

Pump type: SQ 3-65 (as it offers the best pump efficiency for the required flow and head).

Required pump power input: 1.52 kW.

Rated current: I<sub>1/1</sub> = 6.7 A at 230 V.

I<sub>1/1</sub> = 7.8 A at 200 V.

Pipe connection: Rp 1 1/4.

Length of pump: 826 mm.

## Example

### How to select an SQ pump

- A head of 68 m and a flow of 2.4 m<sup>3</sup>/h are required.
- The pump type best meeting these requirements is SQ 3. In the curve chart below, draw a rightward, horizontal line from the head required 68 m (1) to the intersection with the vertical line from the required flow (2). In this example, the intersection point (3) of the two lines is not on one of the pump curves, therefore follow the pipe characteristic upwards. The intersection point of the pump curve and the pipe characteristic (4) gives the size of the pump. The size of the pump is SQ 3-65.
- The pump power input per stage (P2) can be read to be 0.20 kW (5), and the pump efficiency per stage is 57 % (6).
- SQ 3-65 has 5 stages. See page 36. With 5 stages, the total pump power input for SQ 3-65 is 1.02 kW, (0.20 kW x 5) which means an MS 3 1.15 kW motor.

### How to select an SQE pump

The procedure for selecting an SQE pump is identical to the procedure for selecting an SQ pump.

Fig. 25 Pump selection in steps

TM01 3046 4801

## Variable speed

The performance of the SQE pump can be adjusted to a specific duty point within its performance range. This is done via the CU 300 or CU 301 and the R100. The SQE pump is ideal especially in cases when the water consumption varies over time and when the duty point is between two pump curves as energy savings can be achieved by reducing the performance to the required speed. Figure 26 shows the performance of an SQE 5-70 pump at various speeds.

TM01 3220 4304

Fig. 26 Performance curve at various speeds

## Curve conditions

The guidelines below apply to the performance curves on pages 32 to 40:

### General

- Tolerances according to ISO 9906, Annex A, i.e. all curves show mean values.
- The curves must not be used as guarantee curves.
- The bold curves show the recommended duty range.
- The measurements were made with airless water at a temperature of 20 °C.
- The conversion between head H [m] and pressure p [kPa] applies to water with a density of 1,000 kg/m<sup>3</sup>.
- The curves apply to a kinematic viscosity of 1 mm<sup>2</sup>/s (1 cSt). If the pump is used for liquids with a viscosity higher than that of water, this will reduce the head and increase the power consumption.
- **Q/H:** The curves are inclusive of valve and inlet losses at the actual speed.
- **Power curve:** P2 shows pump power input per stage.
- **Efficiency curve:** Eta shows pump efficiency per stage.

### Selecting the right pump for the SQE constant-pressure system

Dynamic head [m]	Rated flow [m <sup>3</sup> /h]	System pressure [bar]						
		2.0	2.5	3.0	3.5 (C)	4.0	4.5	5.0
10 to 20	2	← SQE 2-55 →		← SQE 2-85 →

81 to 90	2	← SQE 2-115 →					← SQE 2-115 →	

### How to select an SQE pump

#### Example

#### Required:

Total head (from water level to water tap, including friction loss): 25 m (A).

Maximum flow rate: 3 m<sup>3</sup>/h (B).

System pressure: 3.5 bar (C).

#### Selected:

Pump type: SQE 3-65.

The system pressure can be adjusted to any constant pressure from 2 to 4 bar (D).

Fig. 27 Parameters A and C for selection of an SQE pump

TM03 3431 0406

## Selection of pressure tank

The electronic unit in the SQ pump ensures a smooth start-up. To yield sufficient pressurised water in the period when the pump is not in operation, a pressure tank can be installed in the water supply system.

During start-up, the system pressure will fall below the cut-in pressure of the pressure switch. This value ( $p_{\min}$ ) is to be determined before sizing the pressure tank.

$p_{\min}$  is the required minimum pressure at the highest tap point + head and valve and friction loss from the pressure tank to the highest tap point (C + B).

Furthermore, the flow at  $p_{\min}$  has to be determined. This is called  $Q_{\max}$  and is found in the performance curve for the pump type in question.

Use  $p_{\min}$  and  $Q_{\max}$  in the table below to find the size of the pressure tank, the precharge pressure of the pressure tank and the cut-in and cut-out pressure settings of the pressure switch.

**Note:** If a minimum pressure is not required, an 18-litre pressure tank is sufficient for all SQ pumps.

**Note:** Be sure that the selected pump can deliver a pressure higher than  $p_{\text{cut-out}} + A$ .

Fig. 28 System with pressure tank

- $p_{\text{pre}}$ : Precharge pressure of the pressure tank.
- $p_{\min}$ : Required minimum pressure.
- $p_{\text{cut-in}}$ : Cut-in pressure of the pressure switch.
- $p_{\text{cut-out}}$ : Cut-out pressure of the pressure switch.
- $Q_{\max}$ : Flow at  $p_{\min}$ .
- A: Head + pipe friction loss from dynamic water level to pressure tank.
- B: Head + pipe friction loss from pressure tank to the top tap point.
- C: Minimum pressure at the highest point.

TM00 6445 3795

$p_{\min}$ [m]	$Q_{\max}$ [m <sup>3</sup> /h]																	$p_{\text{pre}}$ [m]	$p_{\text{cut-in}}$ [m]	$p_{\text{cut-out}}$ [m]		
	0.6	0.8	1	1.2	1.5	2	2.5	3	3.5	4	4.5	5	5.5	6	6.5	7	7.5				8

<b>45</b>	8	18	18	18	24	33	<b>33</b>	50	50	50	80	80	80	80					<b>40.5</b>	<b>46</b>	<b>60</b>	
50	8	18	18	18	24	33	50	50	50	80	80	80	80						45	51	65	
55	18	18	18	18	24	33	50	50	50	80	80	80							49.5	56	70	
60	18	18	18	18	24	33	50	50	80	80	80	80							54	61	75	
65	18	18	18	24	24	33	50	50	80	80	80	80							58.5	66	80	

**Note:** The pressure tank sizes stated in the table are minimum requirements. We recommend to use a tank one size bigger.

1 m head = 0.098 bar.

### Example

$p_{\min} = 45$  m,  $Q_{\max} = 2.5$  m<sup>3</sup>/h.

The following values are found in the table:

Minimum size of pressure tank = 33 litres.

$p_{\text{pre}} = 40.5$  m

$p_{\text{cut-in}} = 46$  m

$p_{\text{cut-out}} = 60$  m.

## 8. Technical data

### SQ and SQE pumps

<b>Mains supply to pump</b>	1 x 200-240 V - 10 %/+ 6 %, 50/60 Hz, PE.
<b>Starting</b>	Soft starting.
<b>Stopping</b>	Soft stopping when stopped by the CU 300 or CU 301.
<b>Run-up time</b>	Maximum 3 seconds. No limitation to the number of starts/stops per hour.
<b>Motor protection</b>	Built into the pump. Protection against: <ul style="list-style-type: none"> <li>• Dry running.</li> <li>• Overvoltage and undervoltage, cuts out below 150 V and above 315 V.</li> <li>• Overload.</li> <li>• Overtemperature.</li> </ul>
<b>Sound pressure level</b>	The sound pressure level is lower than the limiting values stated in the EC Machinery Directive.
<b>Radio noise</b>	SQ and SQE pumps comply with the EMC Directive (2004/108/EC). Standards used: EN 55014-1: 2006, EN 55014-2: 1997, EN 61000-3-2: 2006 and EN 61000-3-3: 1995.
<b>Reset function</b>	SQE pumps can be reset via the CU 300 or CU 301 (possibly with the R100).
<b>Power factor</b>	PF = 1.
<b>Operation via generator</b>	We recommend that the generator output is equal to the motor input power (P1) plus 50 %, and at least (P1) plus 10 %.
<b>Earth leakage circuit breaker</b>	If the pump is connected to an electric installation where an earth leakage circuit breaker (ELCB) is used as an additional protection, this circuit breaker must trip out when earth fault currents with pulsating DC content occur.
<b>Pipe connection</b>	SQ 1, SQ 2, SQ 3: Rp 1 1/4. SQ 5, SQ 7: Rp 1 1/2.
<b>Borehole diameter</b>	Minimum 76 mm.
<b>Installation depth</b>	Maximum 150 m below the static water table (15 bar). For horizontal installation, flow sleeve is recommended. Installation depth below dynamic water level: Vertical installation with/without flow sleeve: 0.5 m. Horizontal installation with/without flow sleeve: 0.5 m.
<b>NPSH</b>	Minimum 8 m.
<b>Strainer</b>	Holes in the suction strainer: $\varnothing$ 2.3 mm.
<b>Pumped liquids</b>	SQ, SQE (EN 1.4301), SQ-N (EN 1.4401): pH 5 to 9. Sand content up to 50 g/m <sup>3</sup> .

### CU 300 and CU 301 control units

<b>Voltage</b>	1 x 100-240 V - 10 %/+ 6 %, 50/60 Hz, PE.
<b>Power consumption</b>	5 W.
<b>Current consumption</b>	Maximum 130 mA.
<b>Enclosure class</b>	IP55.
<b>Ambient temperature</b>	During operation: -30 °C to +50 °C. During storage: -30 °C to +60 °C.
<b>Relative air humidity</b>	95 %.
<b>Pump cable</b>	Maximum length between CU 300 or CU 301 and pump: 200 m.
<b>Back-up fuse</b>	Maximum 16 A.
<b>Radio noise</b>	CU 300 and CU 301 control units comply with the EMC Directive (2004/108/EC). Standards used: EN 55014 and EN 55014-2.
<b>Marking</b>	CE.
<b>Load</b>	Maximum 100 mA.

### Material specification, pump

Pos.	Component	Material	EN SQ/ SQE	AISI	EN SQ-N/ SQE-N	AISI
1	Valve casing	Polyamide				
1a	Discharge chamber	Stainless steel	1.4301	304	1.4401	316

## Wiring diagrams

### Mains connection of pump via pressure switch

The pressure switch must be rated to the maximum amps of the specific pump size.

Fig. 30 Wiring diagram to main supply

TM01 1480 4697

## Electrical connection of CU 300

Fig. 31 Electrical connection of CU 300

TM01 3008 2898

#### Alarm relay

Potential-free changeover contact.

Maximum contact load: AC 250 V, maximum current 1 A.

Minimum contact load: DC 5 V, 10 mA.

#### Auxiliary relay

Potential-free changeover contact.

Maximum contact load: Safety extra-low voltage to be used only.

Maximum current 1 A.

Minimum contact load: DC 5 V, 10 mA.

#### Digital input

External potential-free contact.

Logic "0":  $U_{in} > 3.2$  V.

Logic "1":  $U_{in} < 0.9$  V.

#### Sensor 1

Voltage signal: DC 0-10 V/2-10 V,  $R_i = 11$  k $\Omega$ .

Tolerance:  $\pm 3$  % at maximum voltage signal.

Screened cable recommended. Maximum cable length: 500 m.

Current signal: DC 0-20 mA/4-20 mA,  $R_i = 500$   $\Omega$ .

Tolerance:  $\pm 3$  % at maximum current signal.

Screened cable recommended. Maximum cable length: 500 m.

#### Sensor 2

Potentiometer: DC 0-24 V, 10 k $\Omega$  (via internal voltage supply).

Screened cable recommended. Maximum cable length: 100 m.

Voltage signal: DC 0-10 V/2-10 V,  $R_i = 11$  k $\Omega$ .

Tolerance:  $\pm 3$  % at maximum voltage signal.

Screened cable recommended. Maximum cable length: 500 m.

Current signal: DC 0-20 mA/4-20 mA,  $R_i = 500$   $\Omega$ .

Tolerance:  $\pm 3$  % at maximum current signal.

Screened cable recommended. Maximum cable length: 500 m.

## Electrical connection of CU 301

### Sensor

Voltage signal: DC 0-10 V/2-10 V,  $R_i = 11\text{ k}\Omega$ .  
 Tolerance:  $\pm 3\%$  at maximum voltage signal.  
 Screened cable recommended. Maximum cable length: 500 m.

Current signal: DC 0-20 mA/4-20 mA,  $R_i = 500\ \Omega$ .  
 Tolerance:  $\pm 3\%$  at maximum current signal.  
 Screened cable recommended. Maximum cable length: 500 m.

Product number for the pressure sensor, 4-20 mA, 0-6 bar: 96437851.

### Operating relay

The operating relay is a normally open (NO) contact.  
 The relay is activated when the pump is running.

- Maximum current: 0.5 A.
- Maximum voltage: 230 VAC.

TM03 3430 0406

## 9. Accessories

### Constant-pressure packages incl. pump

Contents	Pump type	Cable length [m]	Product number
One constant-pressure package includes: <ul style="list-style-type: none"> <li>• SQE pump incl. cable</li> <li>• CU 301 control unit</li> <li>• Tank, 8 litres</li> <li>• Pressure sensor, Pt 0-6 bar</li> <li>• Pressure gauge, 10 bar, Ø63</li> <li>• Ball valve, 3/4"</li> <li>• Cable clips, 20 pieces</li> </ul>	SQE 2-55	40	96524505
	SQE 2-85	60	96524506
	SQE 2-115	80	96524507
	SQE 3-65	20	96524502
	SQE 3-65	40	96524501
	SQE 3-105	80	96524508
	SQE 5-50	40	96524509
	SQE 5-70	40	96524503

### Constant-pressure package excl. pump

Contents	Product number
<ul style="list-style-type: none"> <li>• CU 301 control unit</li> <li>• Tank, 8 litres</li> <li>• Pressure sensor, Pt 0-6 bar</li> <li>• Pressure gauge, 10 bar, Ø63</li> <li>• Ball valve, 3/4"</li> <li>• Cable clips, 20 pieces</li> </ul>	96524504

**Note:** The constant-pressure package can be used with all SQE pumps.

## CU 301

Product	Product number
CU 301	96436753 (Europe)

## Pressure sensor for CU 301

Product	Measuring range [bar]	Product number
Pressure sensor kit incl. 2 m cable	0-6	405168

## CU 300

Product	Product number
CU 300	96422775 (English)

Language-specific CU 300 versions are available on request.

## Submersible drop cable

TM00 7882 2296

Description	Version	Nominal diameter [mm]	Product number
3-core cable incl. earth conductor (KTW-approved). When ordering, please state length [m].	3G 1.5 mm <sup>2</sup> (round)	9.6 - 12.5	ID7946
	3G 2.5 mm <sup>2</sup> (round)	11.5 - 14.5	ID7947
	3G 4.0 mm <sup>2</sup> (round)	13.0 - 16.0	ID7948
	3G 6.0 mm <sup>2</sup> (round)	14.5 - 20.0	RM4098
	3G x 1.5 mm <sup>2</sup> (flat)	6.5 - 13.2	RM3952

## Cable termination kit, type KM

TM03 0181 4404

Description	Cross-section of leads [mm <sup>2</sup> ]	Product number
For watertight shrink-joining of motor cable and submersible drop cable (round or flat cable). Enables the joining of: • cables of equal size. • cables of different size. • cable leads with single leads.	1.5 - 2.5 4.0 - 6.0	96021462 96021473
The joint is ready for use after a few minutes and requires no long hardening time as do resin joints. The joint cannot be separated.		

## Cable clips

TM00 4179 1994

Description	Specification	Product number
For fastening of cable and straining wire to the riser pipe. The clips should be fitted every 3 metres. One set for approx. 45 m riser pipe.	Length = 7.5 m 16 buttons	115016

## Pressure tank

TM02 7934 4403

Duty range					
Precharge pressure:	1.5 bar				
Maximum operating pressure:	10 bar				
Maximum liquid temperature:	+99 °C				
Flange material:	Stainless steel				
Description [litre]	Connection	D [mm]	H [mm]	Weight [kg]	Product number
8	G 3/4	202	303	2.3	96528335
18	G 3/4	279	367	4.6	96526322
24	G 1	289	447	5.1	96528339
33	G 1	289	584	6.7	96528340
60*	G 1	397	557	11.0	96528341
80*	G 1	397	755	16.0	96528342

\* For installation on the floor. Fitted with 90 ° elbow.

## Zinc anodes

Description	Product number
Cathodic protection by means of zinc can be used for corrosion protection of SQ/SQE pumps in chloride-containing liquids, such as brackish water and seawater.	
Sacrificial anodes are placed on the outside of the pump and motor as protection against corrosion.	96777520
The number of anodes required depends on the pump and motor in question.	
Product number includes 2 x 6 anodes with clips.	
Dimensions: Diameter when fitted: 125 mm.	
Minimum borehole diameter: 127 mm (5").	

TM01 4430 0199

## Pressure gauge

Measuring range [bar]	Connection	Diameter [mm]	Product number
0-6	G 1/4	50	ID3266
0-10	G 1/4	63	ID8048

TM01 3092 3498

## Straining wire

Description	Diameter [mm]	Product number
Stainless steel EN 1.4401.		
Retains the submersible pump.	2	ID8957
When ordering, please state length [m].		

TM00 7897 2296

## Wire clamp

Description	Material	Product number
Two clamps per loop	Stainless steel EN 1.4401	ID8960

TM00 7898 2296

## Flow sleeve

TM01 3292 3798

Description	Material	Product number
Flow sleeve	Stainless steel EN 1.4301	91071933
Strainer	Stainless steel EN 1.4301	91071934
Supporting brackets	Stainless steel EN 1.4301	91071935

## Pressure Manager

TM04 0333 0508

Product	Voltage [V]	Maximum current [A]	Motor size (P2) [kW] / [hp]	Product number
PM 1 1.5 bar	230	6	0.7 / 0.5	96848693
PM 1 2.2 bar	230	6	0.7 / 0.5	96848722
PM 2	230	10	0.7 - 1.15 / 0.5 - 0.75	96848740

## R100 remote control

TM00 8367 4801

Description	Product number
The R100 is used for wireless communication with the CU 300 and CU 301. The R100 communicates via infrared light.	625333

## SPP 1 potentiometer

TM00 2604 4793 - TM01 3291 3798

Description	Version	Product number
External potentiometer with cabinet for wall mounting. Screened cables, 4-wire cable. Maximum cable length: 100 m.	Grundfos SPP 1 potentiometer. Enclosure class: IP55.	625468

## SQE Speed Calculation program

Description	Product number
• SQE Speed Calculation program CD-ROM	96478266
• Operating manual	

## Sensors

Sensors	Supplier	Type	Measuring range	Product number
Level sensor incl. 30 m cable	JUMO	4390-242	0 - 2.5 bar	96037489
Level sensor incl. 65 m cable	JUMO	4390-242	0 - 6 bar	96037490
Level sensor incl. 105 m cable	JUMO	4390-242	0 - 10 bar	96037491
Pressure switch	Condor	MDR 21/6	1 - 6 bar	ID6462
Flow switch unit (SQE 1, SQE 2, SQE 3)	Grundfos	MDR 21/6 1"	0 - 5 m <sup>3</sup> /h	96037332

## Submersible drop cables

The submersible drop cables are approved for use in drinking water (KTW-approved). The submersible drop cable is made of EPR.

The table below shows the maximum length of the submersible drop cable for the various sizes of cross-section of the leads according to a 4 % voltage drop which depends on IEC 3-64, HD-384 series or regulations set by the local authorities.

If the pump operates at a higher voltage drop, the pump performance will be reduced. The pump will be cut out if the voltage falls below 150 V.

### Maximum cable lengths

Motor output power (P2) [kW]	I <sub>1/1</sub> [A]	Maximum cable length [m]			
		1.5 mm <sup>2</sup>	2.5 mm <sup>2</sup>	4 mm <sup>2</sup>	6 mm <sup>2</sup>
0.7	5.2	69	115	185	277
1.15	8.4	43	71	144	171
1.68	11.2	32	54	86	129
1.85	12.0	30	50	80	120

The above table shows maximum cable lengths on the amperage shown.

The lengths are calculated from this formula:

$$L = \frac{U \times \Delta U}{I \times 2 \times 100 \times (PF \times \frac{\rho}{q})} \text{ [m]}$$

L = Maximum cable length [m]

U = Rated voltage [V]

ΔU = Voltage drop [%]

I = Rated current of the motor [A]

ρ = Specific resistance: 0.02 [Ω mm<sup>2</sup>/m]

PF = 1

q = Cross-section of submersible drop cable [mm<sup>2</sup>]

However, in some cases a given SQ model will not be capable of consuming the amperage shown and a cable with a smaller cross-section may be used.

See *Pump sizing*, page 27, for detailed amperage ratings by individual pump model.

### Example

Voltage supply: 230 V.

Voltage drop: 4 % (up to 9 % may be used depending on local regulations).

Current of the motor: 2.3 A (see SQ 5-15).

q = 1.5 mm<sup>2</sup> cable.

$$L = \frac{230 \times 4}{2.3 \times 2 \times 100 \times 1 \times \frac{0.02}{1.5}} \text{ [m]}$$

L = 150 m

The product numbers in the table below cover the following:

- one cable length with motor plug, packed
- 4 screws (M4) for fitting of plug
- 2 screws (M3 x 6) for fitting of cable guard to suction strainer.

Length [m]	Cross-section of leads			
	1.5 mm <sup>2</sup>	2.5 mm <sup>2</sup>	4 mm <sup>2</sup>	6 mm <sup>2</sup>
	Flat	Round	Round	Round
1.5	97778318	-	-	-
5	97778319	-	-	-
10	97778320	-	-	-
15	97778321	-	-	-
20	97778322	-	-	-
30	97778323	-	-	-
40	97778324	97778346	-	-
50	97778325	97778347	-	-
60	97778326	97778348	-	-
70	97778327	97778349	-	-
80	97778328	97778350	97778353	-
90	97778329	97778351	97778354	97778356
100	97778330	97778352	97778355	97778357

For cables with the lead cross-section of 2.5, 4 or 6 mm<sup>2</sup>, the cable consists of 1.5 m flat motor cable followed by a round submersible drop cable.

## SQ and SQE packages

Packages of SQ and SQE pumps including selected lengths of submersible drop cable are listed below.

The cable lengths in the table below are calculated according to the actual motor load of each specific pump size.

Pump type	Cable length (3 x 1.5 mm <sup>2</sup> ) [m]	Product number
SQ 1-65	30	96524421
SQ 1-80	30	96524428
SQ 1-80	50	96524429
SQ 1-140	70	96524442*

\*\* 3 x 4 mm<sup>2</sup>.

\*\*\* Fitted with schuko plug.

# 11. Further product documentation

## WebCAPS

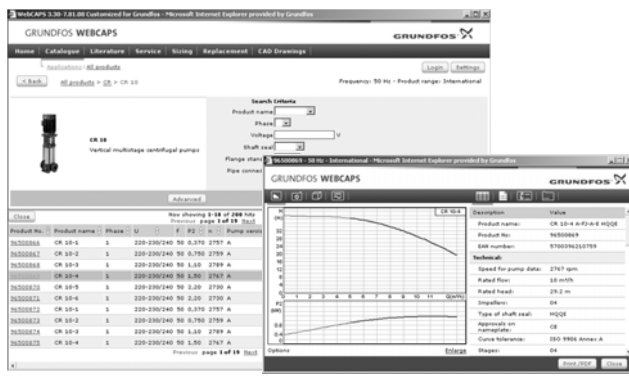

WebCAPS is a **Web-based Computer Aided Product Selection** program available on [www.grundfos.com](http://www.grundfos.com).

WebCAPS contains detailed information on more than 220,000 Grundfos products in more than 30 languages.

Information in WebCAPS is divided into six sections:

- Catalogue
- Literature
- Service
- Sizing
- Replacement
- CAD drawings.

### Catalogue

Based on fields of application and pump types, this section contains the following:

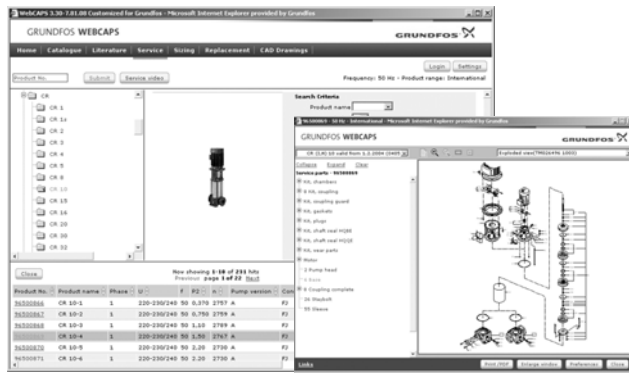

- technical data
- curves (QH, Eta, P1, P2, etc.) which can be adapted to the density and viscosity of the pumped liquid and show the number of pumps in operation
- product photos
- dimensional drawings
- wiring diagrams
- quotation texts, etc.

### Literature

This section contains all the latest documents of a given pump, such as

- data booklets
- installation and operating instructions
- service documentation, such as Service kit catalogue and Service kit instructions
- quick guides
- product brochures.

### Service

This section contains an easy-to-use interactive service catalogue. Here you can find and identify service parts of both existing and discontinued Grundfos pumps.

Furthermore, the section contains service videos showing you how to replace service parts.

**Sizing**

This section is based on different fields of application and installation examples and gives easy step-by-step instructions in how to size a product:

- Select the most suitable and efficient pump for your installation
- Carry out advanced calculations based on energy consumption, payback periods, load profiles, life cycle costs, etc.
- Analyse your selected pump via the built-in life cycle cost tool
- Determine the flow velocity in wastewater applications, etc.

**Replacement**

In this section you find a guide to selecting and comparing replacement data of an installed pump in order to replace the pump with a more efficient Grundfos pump. The section contains replacement data of a wide range of pumps produced by other manufacturers than Grundfos.

Based on an easy step-by-step guide, you can compare Grundfos pumps with the one you have installed on your site. When you have specified the installed pump, the guide will suggest a number of Grundfos pumps which can improve both comfort and efficiency.

**CAD drawings**

In this section, it is possible to download 2-dimensional (2D) and 3-dimensional (3D) CAD drawings of most Grundfos pumps.

These formats are available in WebCAPS:

2-dimensional drawings:

- .dxf, wireframe drawings
- .dwg, wireframe drawings.

3-dimensional drawings:

- .dwg, wireframe drawings (without surfaces)
- .stp, solid drawings (with surfaces)
- .eprt, E-drawings.

**WinCAPS**

Fig. 33 WinCAPS CD-ROM

WinCAPS is a **Windows-based Computer Aided Product Selection** program containing detailed information on more than 220,000 Grundfos products in more than 30 languages.

The program contains the same features and functions as WebCAPS, but is an ideal solution if no internet connection is available.

WinCAPS is available on CD-ROM and updated once a year.

Subject to alterations.
